TEAM GUIDE

Key Results Guide

How to update the numbers on the DASE Hub dashboard, add new metrics, and control what's shown — written for Helen and Michael.

Questions: Chris Aitken · caitken@uic.edu

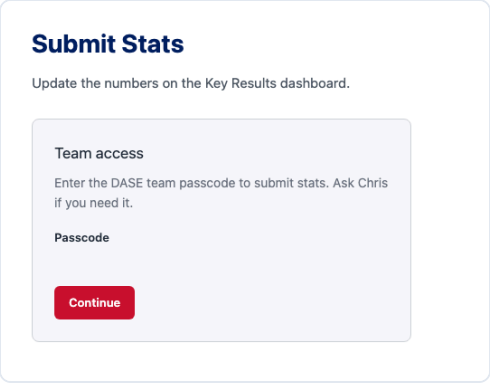

At a glance

The dashboard lives at dase.uic.edu/key-results. Two pages control it, both opened with the DASE team passcode:

I want to…	Go to	What to do
Update a number	dase.uic.edu/submit-stats	Pick the metric → **Update** → type the new number → **Save Update**
Explain what a number counts	Submit Stats → Update	Fill in **What this counts**; it appears under the metric
Set a goal for a metric	Submit Stats → Update	Type the goal in **Goal**; the green bar and a "Goal: … · % there" line follow automatically
Change the unit or wording around a number (e.g. Hours → Sessions)	Submit Stats → Update	Open **Change the wording around the number**, edit the text before/after it, save
Rename a KPI	Submit Stats → Update (or **Rename / goal** on auto-synced rows)	Change **Metric name** and save
Add a new metric to a category	Submit Stats → **+ Add a metric**	Name, value (e.g. "Total: 47 People"), optional goal, your name
Show or hide a metric or category	dase.uic.edu/admin → Dashboard layout	Tick or untick the checkbox
Reorder categories	Admin → ▲ ▼ buttons	Moves the card up or down the dashboard
Add a category (with its date range)	Admin → Add Objective	Title + date range, then add metrics on Submit Stats
Rename a category or change its date range	Admin → **Edit name & dates**	Under the category, change the title or date range and press **Save**
Refresh the Equalify / Iris numbers	Admin → **Sync Now**	Otherwise they refresh on their own every 6 hours

Signing in

1. Open dase.uic.edu/submit-stats (or /admin).
2. Enter the **DASE team passcode** and press **Continue**. It's the same passcode for both pages, and the browser remembers it for 30 days.

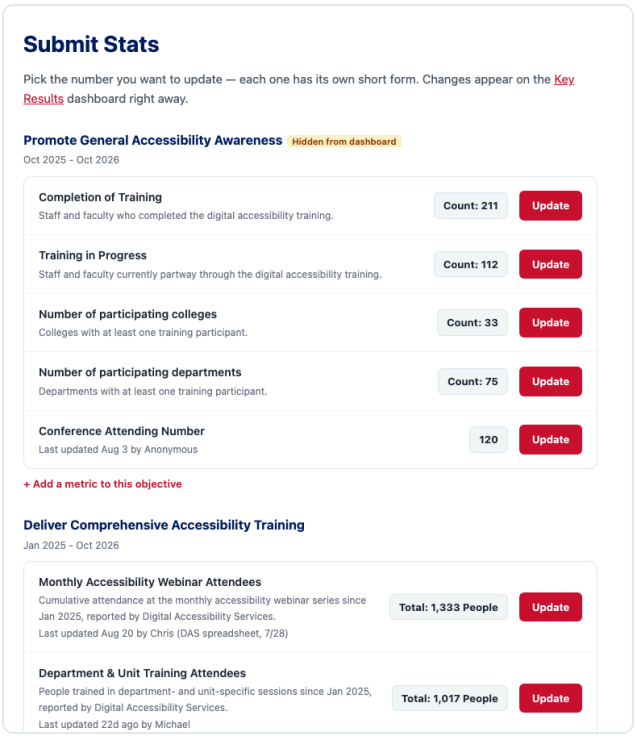

The passcode prompt. Ask Chris if you need the passcode.

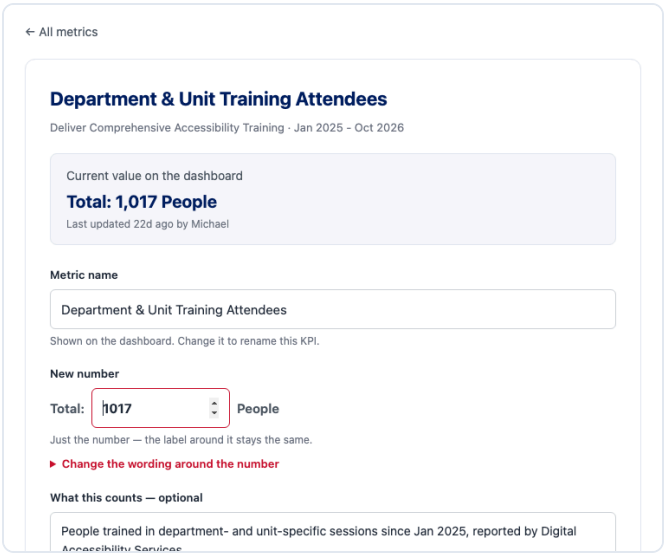

> **If the browser asks for a username and password first,** that's the site's preview login (dase.uic.edu is still in preview). It's separate from the team passcode — use the preview login Chris shared, then the passcode.

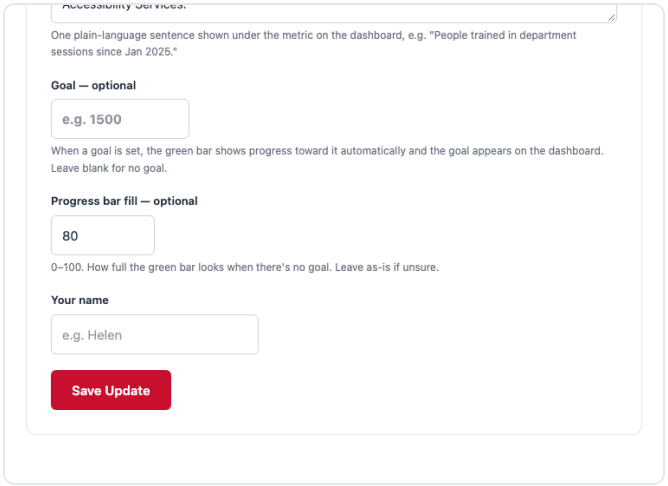

Update a number

1. On **Submit Stats**, scroll to the category (for example *Deliver Comprehensive Accessibility Training*). Each row shows the metric, what it counts, and the value currently on the dashboard.
2. Press **Update** on the metric you want to change.
3. Type the new number. Only the number changes — the words around it ("Total: … People") stay the same, unless you open **Change the wording around the number** to edit them (for example Hours → Sessions).
4. Optionally rename it (**Metric name**), reword **What this counts**, or set a **Goal** — the green bar then tracks progress toward the goal on its own (page 7).
5. Add **your name** and press **Save Update**. The dashboard updates immediately — no sync, no delay.

Manually entered metrics have an **Update** button and show who last updated them.

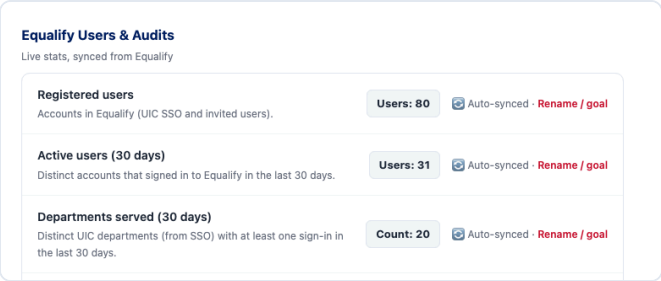

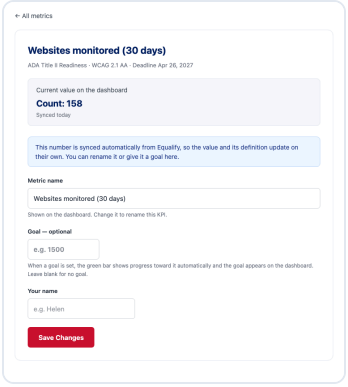

The Update form (top half left, bottom half right): name, number — with a link to change the wording around it — what it counts, goal, and your name. The current value is shown at the top so you can sanity-check before saving.

Auto-synced numbers: rename or set a goal

Metrics marked **Auto-synced** (Equalify scanning, users, Iris conversions, the ADA Title II card) get their value and definition from Equalify every 6 hours, so there's nothing to type in. You can still **rename** them or give them a **goal**: press **Rename / goal** on the row.

Auto-synced rows show **Rename / goal** instead of Update.

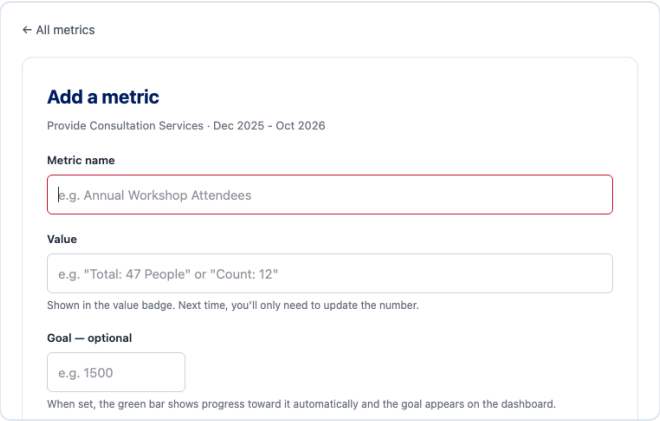

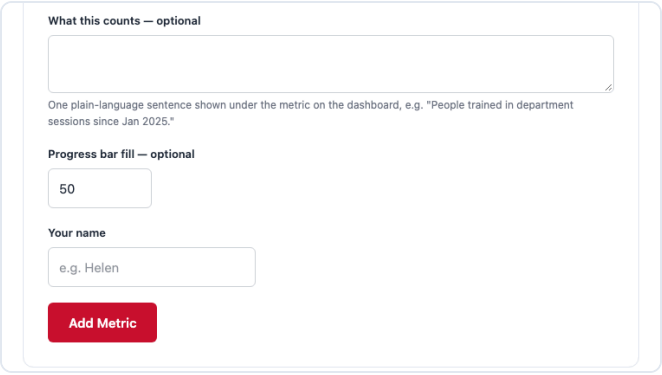

The form for an auto-synced metric: name and goal only.

Add a new metric

Every category on Submit Stats ends with **+ Add a metric to this objective**. Use it when you start tracking something new.

1. Press **+ Add a metric to this objective** under the right category.
2. **Metric name** — what appears on the dashboard, e.g. *Annual Workshop Attendees*.
3. **Value** — the full badge text, e.g. `Total: 47 People` or `Count: 12`. Keep the pattern *label: number unit*; next time you'll only have to type the number.
4. **Goal** (optional) — e.g. `1500`; the bar tracks progress toward it automatically.
5. **What this counts** — one plain sentence. Directors read these, so say where the number comes from.
6. **Your name**, then **Add Metric**.

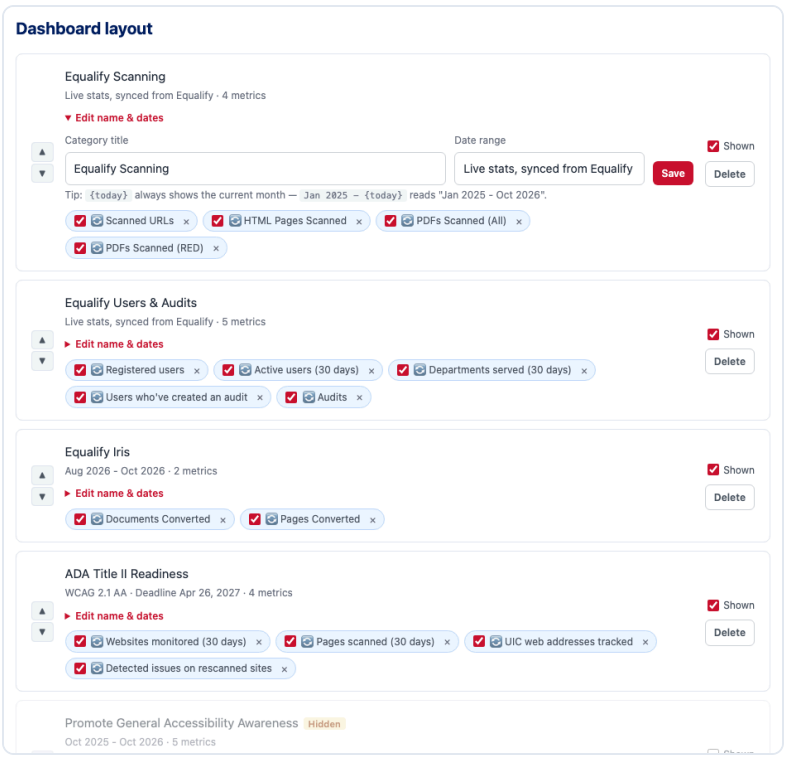

The Add a metric form (top half left, bottom half right), here under *Provide Consultation Services*.

> **Need a whole new category?** Add it on the Admin page first (*Add Objective* — title and date range), then come back to Submit Stats to add its metrics.

Show, hide, reorder and delete

The **Dashboard layout** section of dase.uic.edu/admin lists every category (card) and its metrics.

- **Hide or show a metric** — untick or tick the checkbox next to its name. Hidden metrics keep their values (and keep syncing), they just don't appear publicly. Submit Stats marks them **Hidden**.
- **Hide or show a whole category** — the **Shown** checkbox on the right of the card. A category with no visible metrics also disappears on its own.
- **Rename a category or change its date range** — press **Edit name & dates** under the category title, change the text, press **Save**.
- **Reorder** — the ▲ ▼ buttons move a card up or down the dashboard. Metrics inside a card appear in the order they were added; message Chris if you need them in a different order.
- **Add a category** — the *Add Objective* form at the bottom: a title and a date range (for example `Jan 2026 – {today}`, see page 7).
- **Delete** — the × on a metric or the **Delete** button on a card removes it permanently (you'll be asked to confirm). To take something off the dashboard temporarily, hide it instead.

Dashboard layout: **Edit name & dates** (shown open on the first card), checkboxes to show or hide, ▲ ▼ to reorder, × and Delete to remove. Greyed-out cards are hidden.

Date ranges and goals

Date ranges

The line under each category title (for example *Jan 2025 - Oct 2026*) is the category's date range. Change it any time on the Admin page with **Edit name & dates**. It accepts the token `{today}`, which always shows the current month — so `Jan 2025 – {today}` reads "Jan 2025 - Oct 2026" now and updates itself every month. Use a fixed range (`Feb 2026 – June 2026`) for a project with an end date.

Goals and the progress bar

Give any metric a **Goal** on its Update form (or on **Rename / goal** for auto-synced ones). Once a goal is set:

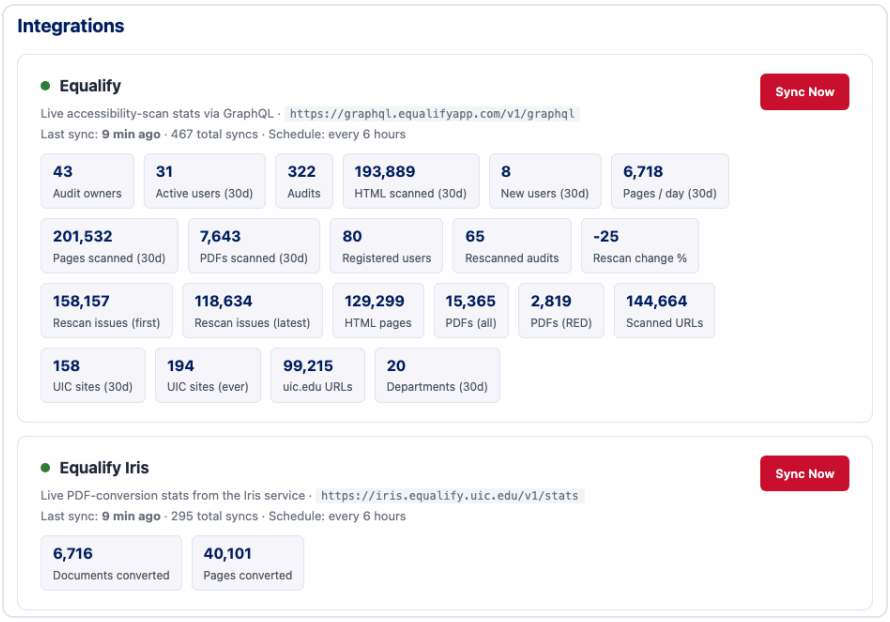

- the green bar shows **current value ÷ goal** automatically — 1,017 attendees against a goal of 1,500 fills the bar to 68% — and keeps itself up to date as the number changes;
- the dashboard shows a line under the metric: *Goal: 1,500 · 68% there*;
- the hand-set *Progress bar fill* no longer applies. Clear the Goal box to go back to setting the bar by hand.

> **Pick goals you'd be happy to see on the public dashboard** — the goal number is visible to everyone, not just the team.

Numbers that update themselves

Four cards are fed by integrations rather than by hand: **Equalify Scanning**, **Equalify Users & Audits**, **Equalify Iris**, and **ADA Title II Readiness**. Each of their metrics shows *Synced from Equalify* (or *Iris*) and when it last refreshed.

- They refresh automatically **every 6 hours**.
- To refresh right now (for example before a meeting), press **Sync Now** on the Admin page's **Integrations** cards.
- Their definitions are fixed by the integration so they always match Equalify's own Account › Statistics page.
- You can still **rename** them, give them a **goal**, **hide** any of them, or move the cards, exactly like manual metrics.

Integrations: last sync time, the raw numbers pulled, and **Sync Now**.

Good habits

- Update manual numbers on a regular day each month, and always add your name. The dashboard shows totals, not history, so keep your own monthly log (the DAS spreadsheet works); the Admin page's **Recent manual submissions** list records who changed what, and when.
- Keep "What this counts" in plain language — it's what directors see.
